For Release

Sirius Launches Packaged DRaaS Solutions with Recovery Point
New Disaster Recovery-as-a-Service solutions help clients address resiliency challenges and evolve their IT operations

San Antonio, TX – 17 July, 2018 – Sirius Computer Solutions, Inc. (Sirius), a leading national IT solutions integrator and managed services provider, and Recovery Point Systems, Inc., independently recognized as a leader in IT resiliency by top industry analysts, have expanded their partnership to offer a set of packaged, multi-platform Disaster Recovery-as-a-Service (DRaaS) solutions.

The integrated Sirius and Recovery Point DRaaS solutions will complement existing solutions, while enabling clients to ensure compliance by building a robust business continuity and disaster recovery strategy. Additionally, they will help organizations evolve their IT operations to support hybrid cloud-based deployments by addressing complex resiliency challenges.

As enterprises continue their journey to the cloud, and IT organizations embrace the operational and economic advantages of DRaaS solutions, these new alternatives are quickly becoming an integral component of holistic business transformation for resilience strategies. Furthermore, when a client's resiliency requirements extend beyond simple server recovery, the new packaged DRaaS solutions can be deployed as a fully managed SLA-based business process resilience solution, offering RTOs designed around application log-in. Sirius' multi-platform DRaaS solutions also integrate easily with Backup as a Service (BaaS), Sirius' tiered backup and object storage solution, thereby reducing the cost and data transfer challenges of the public cloud.

"Sirius helps prepare organizations for new resiliency challenges in the era of the cloud-based hybrid data center. And now, through our expanded partnership with Recovery Point, we can offer a clear path to implementing DRaaS across the widest range of technology platforms in the industry," says Michael Conley, executive vice president of Managed Services at Sirius. "In addition, Sirius Managed Services' expertise is available to alleviate the day-to-day management and administration of a client's IT environment, and provides multiple benefits that include economies of scale, operational efficiencies and best practices."

"These new packaged DRaaS offerings, integrated into our extended partnership with Sirius, mean that resilience can be built into a client's cloud-based IT operational deployment and not just bolted on at a later date," says Marc Langer, president of Recovery Point. "That kind of seamless integration is increasingly important to clients whose business models have a low tolerance for business process downtime."
