## BENEFITS OF CIRCINUS SECURITY ANALYTICS POWERED BY SIRIUS

- Help your security team become continuously adaptive through the use of advanced analytics
  - Improve information sharing, intelligence production and text analytics capabilities
  - Develop a greater understanding of the strengths, dispositions and intentions of cyber adversaries
  - Enable massive and expandable compute power
  - Gain best-of-breed analytics and data science tools in a single platform
- 

# CIRCINUS SECURITY ANALYTICS POWERED BY SIRIUS

## LEVERAGE STRUCTURED AND UNSTRUCTURED DATA TO PROACTIVELY PREVENT ATTACKS

The exponential growth of data, increasing attack vectors, stringent data protection and data privacy requirements, and a shortage of skilled personnel have made cybersecurity a dynamic, everyday concern. Together, Sirius and Circinus provide organizations with intelligence-led security analytics, enabling security analysts to better keep up with the information they need to do their jobs, and more effectively triage potential threats.

Circinus Security Analytics Powered by Sirius provides both public and private sector organizations with a decision support architecture that enables the use of publicly available information to produce open source intelligence (OSINT). It leverages structured and unstructured data and a comprehensive data ingestion and management architecture to streamline the analysis of threats, and establish connections in new and meaningful ways.

Sirius and Circinus work together to leverage leading-edge IBM® technology solutions and expert advisory and implementation services to bring tools, processes and personnel together to help you mitigate risk with visibility, analysis and action. Secure IBM Z® mainframes set the foundation; intelligence analysis, cognitive exploration and content analysis, data science, and collaboration platforms provide a world-class analytics stack for powerful information sharing, intelligence production and text analytics capabilities, and the ability to scale predictive models.

With Circinus Security Analytics Powered by Sirius, organizations can arm themselves with the tactical, operational and strategic insights they need to connect facts, and develop a cohesive picture of how they are being targeted so they can shift from reactively defending against, to proactively preventing attacks.

## ABOUT CIRCINUS, LLC

Based in Fredericksburg, Virginia, Circinus has been providing intelligence services in support of the missions of federal, civilian and military organizations worldwide since its founding by veterans in 2005. Circinus actively recruits and employs the best and brightest from the retired military, law enforcement and intelligence communities, and applies their operational experience in the fields of special operations and intelligence to modern research and development challenges. A wholly-owned subsidiary of TDC, LLC, Circinus is a member of a global business network that provides the infrastructure and capital to operate in austere, challenging environments without cumbersome approval mechanisms. Circinus' four divisions represent functional areas in which they maintain a wide scope of capabilities: Intelligence, Special Operations, Special Activities, and Law Enforcement.

## ABOUT THE SIRIUS DATA AND ANALYTICS PRACTICE

Sirius' Data and Analytics team provides industry-leading consulting services that utilize proven technologies clients need to harness the power of their big data and business analytics landscape. Every solution we provide is integrated, implemented and supported by our solution experts. Whether you are looking to optimize the performance of data warehousing and reporting solutions you already have in place, or implement new solutions as part of a data management strategy, we have the experience and expertise your organization needs to build a robust end-to-end data management solution.

## ABOUT THE SIRIUS SECURITY & RISK MANAGEMENT PRACTICE

With an end-to-end portfolio of products and services backed by decades of expertise, the Sirius Security team is uniquely positioned to help organizations mature their security programs, reduce risk, and take a forward-leaning approach to prevention, detection and response. Our offerings focus on the fundamental elements of an effective security program with an eye toward helping our clients address the cybersecurity skills gap, and leverage the cloud to boost agility and innovate faster than ever before.
