

TRANSFORMING HEALTHCARE

Healthcare innovation and digital transformation can take a variety of forms depending on context. Sirius focuses on the intersection of technology and care. We believe that solutions should center on patients, staff and the healthcare business rather than on the technology. That's why Sirius carefully considers how migrating your technology infrastructure to modern, cost-effective, easier-to-manage environments can assist in serving your business goals.

Along with our strategic partners, Sirius has developed thought leadership around these frameworks. We are dedicated to understanding the unique needs and challenges of healthcare to build better solutions for you.

SIRIUS HEALTHCARE SOLUTIONS INNOVATION AND SOLUTIONS WITH A TWIST

With over 350 active healthcare clients, Sirius understands the challenges faced during this time of rapid industry and regulatory change. Sirius has extensive experience implementing technology solutions that are specific to the healthcare industry, and can provide industry-leading solutions for all your technological challenges.

Our dedicated healthcare practice is led by individuals who have direct industry experience, including IT leadership positions with major provider organizations. These team members are focused on solution frameworks that meet today's needs, but also have the flexibility to adjust as the industry and regulations shift.

Sirius works to help organizations innovate by transforming patient care, clinical efficiencies and business impact. This is the primary goal of our recently launched MemorialCare Technology and Training Center Powered by Sirius, a dedicated facility where we meet with clients to test, demonstrate and perform proofs-of-concept on all of the healthcare-related technologies that Sirius provides.

Sirius is a proud member of the CHIME Foundation, a non-profit organization dedicated to thought leadership in the healthcare industry.

THE THREE PILLARS OF HEALTHCARE TECHNOLOGY

Sirius has identified the three pillars of a successful, comprehensive healthcare IT strategy, every one of which supports and functions with the others to ensure that your organization is secure, compliant, efficient, and provides the highest possible quality of care. Regardless of which areas you have already implemented — or have yet to begin — Sirius can help you identify, plan and execute on your technology solutions.
