Learn how to reduce costs and future proof your application development investments with our Modernization Assessment.

IT organizations are constantly updating and developing new applications to meet market demands while replacing older legacy systems. The biggest challenges associated with modernization are doing it quickly, affordably and with as little disruption as possible.

Our Modernization Assessment provides a detailed assessment that will shine a light on the programming languages and platforms your IT teams use and provides options to modernize these applications to reduce future IT costs.

During the assessment, our experts work with your development and operations teams to review your current applications using our proprietary scanning technology. This will assess how your technologies are evolving and determine the steps needed to modernize your applications to benefit from a cloud native architecture. We will provide additional insights into the programming languages your organization uses, how they’re changing, and what platforms those applications utilize.

You will have solid insight into how your IT organization is constructed and how to modernize to reduce IT costs.
WHO WE ARE

Sirius is a national integrator of technology-based business solutions that span the enterprise, including the data center and lines of business. FiveOut, a Sirius Agency, is an award winning full service digital agency. As experts in business transformation, we integrate technology, data, creative and marketing know-how to build exceptional customer experiences.
